

## Grass Catcher Belt Routing

**Details:** Route the blower drive belt so that the "V" side of the belt rides in the "V" groove of the drive pulley mounted on the RH blade spindle, the driven pulley mounted on the outside of the blower, and the stationary idler pulley bolted to the blower. The "flat" side of the drive belt should ride against the flat groove found on the spring tensioner pulley. Refer to diagram below for illustration of belt routing.

After routing the blower drive belt, be certain to install the drive pulley guard included with your grass catcher kit.
